

ZPAY NETWORK

WHITEPAPER V1.0

WHITEPAPER | DECEMBER 2017

Summary

1. Introduction

a) Blockchain Technology

b) Smart Contract

2. What is the Zpay Network

3. Token Information and Distribution

4. Airdrop and Bounty Program

5. Token Sale Information

6. Development Roadmap

7. Development of Light Wallet

8. Reach us

Introduction

Zpay Network is Cryptocurrency created with smart contracts, using Ethereum blockchain technology. it can also known as token ERC20. Zpay Network allows faster transactions and is more efficient compared to Bitcoin or other cryptocurrencies.

It only takes a few seconds to make a confirmation (to send or received into a wallet). Zpay Network will be distributed in several ways including airdrop, donations, bounty and token sales. the total supply of this cryptocurrency 3,000,000 so the token will be selectively shared using the methods stated above. we hope that someday Zpay Network can be one of the high value cryptocurrencies on the market.

Blockchain Technology

Blockchain can be defined as an integrated transaction logging technology. It is a ledger that is used to record and log transactions across computers worldwide. This has a unique code that cannot be changed (eternal). Blockchain technology has revolutionised the workings of the internet, banking and online dealings.

Chain is a unique chain record. It is the path of all consistent stages of a transaction. Block (special box) is a place / boundary / area, specifically accommodating an item / transaction changes that occur during the chain process.

Smart Contract

Smart contracts are account holding objects on the Ethereum Blockchain. They contain code functions and can interact with other contracts, make decisions, store data, and send Ethereum to others. Smart contracts are defined by their creators, but in their execution, and by extension the services they offer, are provided by the Ethereum network itself. They will exist and be executable as long as the whole network exists, and will only disappear if they were programmed to self destruct.

What Is Zpay Network

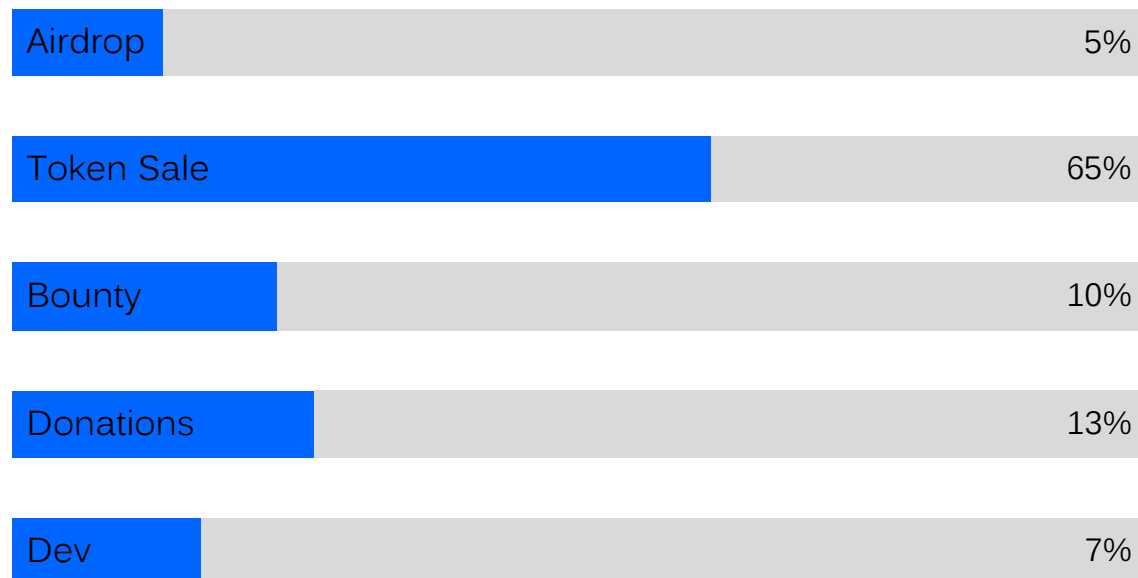

As one of the cryptocurrencies on the market, Zpay Network will be widely circulated in the market to make payments more modern and efficient. Our team is working hard in making sure that Zpay Network tokens are an efficient payment tool in the market. Our team will be working on negotiating different deals with different merchants to accept Zpay Network tokens as a payment option.

Why is Zpay Network able to offer better efficiency and faster transactions? Zpay Network uses a peer to peer system decentralised by the Blockchain Ethereum network. The Zpay Network is able to replace the ancient payment role i.e. still using third party assistance such as banking and instruments (the payment was being made in cash or non cash by the user).

Token Information and Distribution

Contract	0xbd6a473b817843cc9ef5c02d52bb29b07976b6d7
Supply	3,000,000
Symbol	ZPN
Decimal	18

Distribution Details

Airdrop	150.000 ZPN
Token Sale	1.950.000 ZPN
Bounty	300.000 ZPN
Donations	390.000 ZPN
Developer	210.000 ZPN

Airdrop and Bounty Program

To start and introduce Zpay Network to the community, a free airdrop distribution will be offered to anyone who participated. There will be only one airdrop with the following prizes:

Airdrop

Airdrop : 30 ZPN for 5000 people

Bounty Program

Twitter (10 ZPN)

Tweet with hastag #ZpayNetworkToken

Youtube (500 ZPN)

Create promotional videos about “Zpay Network token”

Translate (100 ZPN)

Translations into multiple languages

Blog (150 ZPN)

Create promotional content on a blog “ZpayNetworkToken”

Token Sale Information

As much as 60% of Zpay Network tokens (of the total supply) will be sales to investors. You can buy Zpay Network tokens as of now at a discounted price. Once the sales have finished, it will be available through the exchange market at a higher rate.

You can buy instant tokens during token sale process. More than half of the funds from the sale of Zpay Network tokens will be allocated to the progress of the project including funds for listing in the market, and making wallet light versions for android and iOS users.

Bonus Structure

Bonus	30 %	Week 1
Bonus	20 %	Week 2
Bonus	10 %	Week 3
Bonus	0 %	Week 4

Token Sale Details

Supply	3,000,000
For Sale	1,950,000
Price	1 ETH = 3000 ZPN
Sale Period	06/12/2017 – 01/01/2018
Payment	Ethereum

Development Roadmap

Q4 2017

Contract creation and airdrop distribution.

Q4 2017

Token sale starts.

Q1 2018

Website established with new features.

Q1 2018

Development of light wallet API starts.

Q1 2018

Listing on potential exchange and bounty program.

Q1 2018

Listing on Coinmarketcap.

Q3 2018

Listing on more bigger exchanges.

Q3 2018

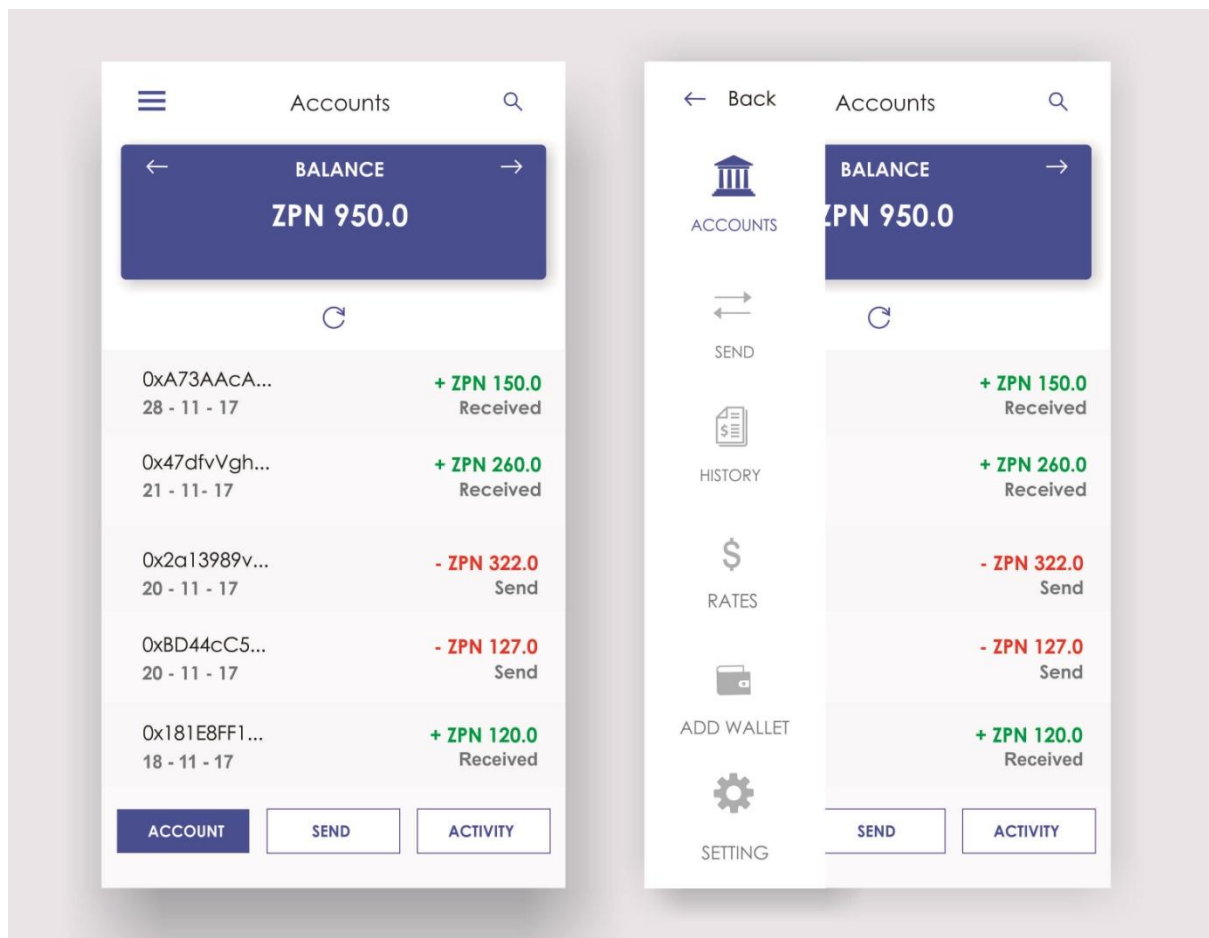

Wallet light beta version for android and iOS.

Q3 2018

Negotiations with potential merchants over accepting ZPN as a
Cryptocurrency.

Development of Light Wallet

In order to facilitate the transaction when Zpay Network users send and receive a token, we have a plan in place to make a light wallet that will be running smoothly on android and ios platforms.

With the light wallet Zpay Network version, you will have complete freedom with your tokens. You can receive and send tokens whenever and wherever you are. our team is working hard to make it more accurate and efficient. check out our amazing Zpay Network roadmap. once light wallet Zpay Network is launched, you can also store Bitcoin and Ethereum currencies, which will make it very useful for the whole community.
